

Health Clinic

The onsite nurse located in Pod/Health Team are responsible for providing first-line primary care to residents, this is all completed in the zones. Residents onsite are encouraged to seek telehealth consultation with their own medical services and general Practitioners where possible. In the circumstance where this is not possible or the situation warrants more urgent face-to-face consultation, a referral is made to the Medical Officers.

The health clinic is where the Medical Officers are located with a clinic established to run as a vaccination clinic and hub for core health delivery requirements. The clinic requires stock as seen in a standard primary health clinic and should have appropriate security applied.

The clinic should be strategically placed close to the main staff buildings and the red zone (for quick access for any resident who may become unwell whilst positive). A more detailed presentation of the clinic processes has been presented in the Vaccination Clinic section, recognising that this was where the face-to-face clinical interactions occurred.

Clinic requirements:

- A treatment room is established with a hospital grade bed (electric with position manoeuvrability), sink, equipment to monitor vital signs, electrocardiograph, AED, and additional equipment as presented in the Appendices A.
- A safe provided for the storage of any schedule 8 medications. Although it is recommended that S8's and opioids are not kept onsite there may be times when these are required for a resident. Keys to open the safe and box are stored with the DMO/Director of Health Services.
- Medication imprest locked in a cupboard in the treatment room.
- A small table top Vaccine Fridge to store vaccines (refer to the section on vaccination for a full presentation of vaccine clinic and administration requirements).
- Clinical supplies and equipment are stored in the treatment room organised into clear boxes for ease of identification. All boxes are labelled and the amounts of items are documented on the labels. See Appendices A for a list of common stored items and a comprehensive list of all stored clinical equipment and clinical supplies. This is the equipment to stock Pod backpacks and clinical boxes.

Appendices A

Health clinic: Common stored items, clinical equipment and clinical supplies store

Section 5: Table: Common stores items required for a primary health clinic in the quarantine setting.

Dressings

Dressing Basic Pack

Underpads 5 Ply

Dressing Film Island Adhesive 8cm x 10cm
